ProSlicer®

ROAD MAINTENANCE

[sfgroadmaintenance.com](http://sfgroadmaintenance.com)

ProSlicer® is created through the addition of a high performance liquid deicer to a screened ice melt crystal. Through the use of prewetting technology, each crystal is encapsulated in liquid deicer to give it the one-two high performance punch of a fast melting liquid deicer and the staying power of granular ice melt. ProSlicer® is known as the fastest to melt snow and ice and perform to its specifications.

#### MELTING SPEED

ProSlicer® quickly melts ice and snow down to -20°F. ProSlicer® performs to specifications almost immediately.

#### SPREAD ABILITY

Flows freely even in sub-freezing conditions and, with precise application to target areas, less material is wasted.

#### PURPLE COVERAGE INDICATOR

The vivid purple deicer is so visible and effective, less material and fewer applications are needed. The purple color is to see and will not track or stain.

#### ANTICORROSION TECHNOLOGY

ProSlicer® is chemically designed with a corrosion protection agent for spreading equipment use.

#### LOW COST

ProSlicer® is economically the right choice for your winter maintenance budget in mind. With fewer applications needed to melt snow and ice, ProSlicer® works faster and lasts longer. Maintains a residual melting effect after the storm events have occurred.

#### LOW COST

When used properly, should not be harmful to vegetation, safe to use on concrete and metal. It is safe to use around pets and is not harmful to your skin.

#### SPECIFICATIONS

Appearance	Purple
Odor	Slight
Handling	Store indoors or covered
Stability	Stable
Water Miscibility	Complete
pH	5.0-10.0
Effective Temperature	-20.0°F
